

Boiler MACT

Wondering about Boiler MACT? Don't Wait, Act Now!

EPA will be issuing new Boiler MACT rules in January 2011, with compliance required by early 2014. **Evergreen Engineering** can help you determine the best strategy for complying with the upcoming Boiler MACT rules. Up-to-date emission inventories are essential to begin determining your facility's status. Every site is unique and requires a thoughtful approach to compliance but time is short and the time to start is **NOW**.

Timeline:

	Now	Compliant	
Emissions Testing & Compliance Options Study	9 months		
Engineering & Procurement		9 months	
Major Equipment, Fabrication, Delivery, & Installation		18 months	
Start-up & Testing			3 months
Compliance Date			2014 Q1

Evergreen offers an economical step-by-step program to determine your facility's individual Boiler MACT compliance status. Our approach draws on our deep well of process expertise as well as our experience in modeling and analysis to understand operational variables. Evergreen will confirm emission inventory estimates; perform a status check of your situation relative to the new Boiler MACT rules; identify and evaluate potential compliance strategies; and recommend a path forward to help you achieve compliance.

Evergreen Engineering is an industry leader in providing detailed engineering for integrating new emissions control equipment into existing facilities and the environmental permitting associated with that equipment.
